

Dominator Ski buoyancy aid

3008278

The Dominator jacket is used for rescue in case of an accident on boat as it allows the user to float on the water. It can also be used by firefighters and civil protection during work or interventions on the water.

The jacket consists of two adjustable belts located in the waist area and one adjustable belt on the chest. The belts prevent the person from falling out of the jacket. The red color provides high visibility and better visibility in conditions of reduced visibility.
