

Donges CrashStay Support System

1017888

Extremely robust, resilient, reliable and safe. A system you can rely on.

The supports can be completely extended continuously along the entire length and then additionally tightened using the supplied control lever. For one 100% perfect fit in every situation. The support is secured self-locking via an eccentric shaft. Since the control lever can then be removed, accidental loosening of the lock is impossible.

The steel structure is not subject to material aging by volatile plasticizers or UV radiation, as it is e.g. is the case with systems with plastic elements. The support can also withstand short load peaks or torsions without splinters or cracks in the material.

Kit Composition:

- Transport bag
- CrashStay mount - 2 pieces

Technical specifications

Weight:	32 kg
Pack size:	1.350 x 210 x 240 mm
Retracted lenght:	1.220 mm
Extended lenght:	2.000 mm
Max. Capacity of the support:	55 kN
Weight per support:	13 kg
Belt lenght:	5 m
