

Dönges Exercise mannequin Crash Kevin 180 cm

Kat. br. 220850

Particularly heavy-duty training doll with many practical functions. Many customer requests and practical details have been implemented in the new training doll in order to improve the durability and application possibilities of the doll.

A very robust nylon material is used, which is even stitched with double layers at the ends of the arms and legs to further increase durability. Loops have been sewn onto the legs to attach shoes, so the doll's material is better protected when dragged across the floor.

The head of the dummy is a separate compartment with its own zipper. For exercises with the thermal imaging camera, for example, a hot water bottle can be well positioned. Fluffy surfaces and the clear pocket on the chest allow easy identification. The doll can be filled with various materials (max. 50 kg).

Features:

- Robust material for the toughest use
- Darts inside for better distribution of filling materials
- Transparent pocket in the chest area
- Self-filling, therefore variable in weight design and easy to store and transport
- Head with separate compartment and zipper (e.g. for hot water bottle)
- Arm and leg ends double-stitched
- Loops for belts and shoes
- Fleece areas on chest and back
- Weight: 680 g
