

Donges Fire Hose Ramp, rubber with reflective bands

100357

Safety hose ramp / bridge with interlocking connecting parts that also serve as handles. Can be adapted to uneven surfaces.

Hose ramps / bridges are used to protect fire hoses at interventions. The ramp is laid in such way that it is laid on the road and fire hoses are laid through its grooves. The vehicles then roll over the ramp with the wheels and thus do not damage the fire hoses under pressure. Also adaptable to rough terrain (dirt or gravel roads).

Technical specifications

- Made of black solid rubber
- Side reflective strips
- Tested up to 40 t of drive load
- Dimensions: 860 x 300 mm
- Weight: 10,500 kg
- For hoses diameter: B/C/D x 2 pcs. (75/52/25 mm)
