

## Dönges Tyre valve screwdriver, 130 mm

Kat. br. 101492

Dönges valve screwdriver 130 mm is designed for all standard valves on cars and trucks. It is suitable for use with standard and Giant valves.

### Usage:

When the tire is inflated, there is a spring insert in the valve that must be removed to facilitate pumping air. By removing the insert, you will prevent compressed air from damaging it. After the tire is sufficiently inflated and the required pressure is measured, screw the insert into the valve with a screwdriver.

### Technical specifications

- Stable steel construction
- Plastic handle resistant to impacts and breakage
- For valve inserts on cars and trucks
- Diameter 1: 4 mm
- Diameter 2: 6 mm
