

Fire extinguisher cabinet 9 kg full door

1008109

Fire extinguisher cabinet (type: 9 kg) with full door, lock and key. The cabinet is easy to install and mount on the wall, ideal for outdoor use because it has a sloped roof that prevents the retention of rain or snow.

The cabinet is supplied with two keys that enable the fire extinguisher to be locked inside the cabinet. In order to easily reach the fire extinguisher in case of a fire, it is necessary that the keys are in a visible and easily accessible place. There is a small window on the cabinet door where one key can be stored, while the other can be stored in a place that suits you best and that you will remember.

In the case of a fire, you can easily break the window in order to take the key and get to the fire extinguisher that is locked in the cabinet.
