

## Fire Hydrant EV Landing Valve

1004114

Cast iron flow valves with a wedge made entirely of rubber are designed to open/close the flow of drinking water or non-aggressive wastewater at a temperature of 70°C and under pressure up to 16 bar.

On request, flow valves can be adjusted to water at a temperature of 120°C, a pressure of 10 bar. The flow valve closes with the handwheel and turns the handwheel clockwise.

### Technical specifications

#### Dimensions:

- Series 14 according to PN-EN 558, series F4 / F5 according to DIN 3202

#### Flange end connections:

- PN-EN-1092-2; DIN 2501
- Flange Drilling: PN 10/16

#### Protective color:

- Epoxy powder paint according to customer's request; polyester or polyurethane
- Coating thickness: 250 µm or according to customer request.

Nominal diameter (DN mm)	Max. pressure (bar)	Testing the resistance of the enclosure (bar)	Seat tightness test (bar)	Max. Working pressure (bar)
40 - 600	16	24	18	16
