Gojak Vehicle Skates 509 kg

3011038

Illegally or inconsideraterly parked vehicles are not only a nuisance, but could be life threatening if they block the path of an emergency vehicle such as an ambulance or fire engine.

The Gojak vehicle skate system is an indispensable tool for the busy Security or Site Manager, offering a simple means of moving vehicles to an alternative location, without damage and within a matter of minutes.

A Gojak mobile wheel lifter is applied to each of the vehicles wheels, and used to crank the wheels clear of the ground. The vehicle can then be safely pushed to a new position where it can be released again (and where it could of course still be clamped for subsequent action) without damage.

Existing Gojak users include:

- Fire Brigades & Police Forces
- Public & Private car park operators
- Universities & Hospitals
- Road surfacing & Construction companies

Technical specifications
