

Hydrant Standpipe C/2C

1033186

Hydrant standpipe C/2C is used for connection to the underground hydrant and water supply. There are two 2" outlets at the exits for connecting fire hoses to the hydrant standpipe. At the entrance is a connection piece 2" that is compatible with the DN 80 underground hydrant.

How to use the Hydrant Standpipe

After we open the cover of the underground hydrant, we place the Hydrant Standpipe in the underground hydrant. After the Hydrant Standpipe is installed, we connect the fire hoses fi 52 mm to its two exits. When we have prepared everything for the supply of water to the place of the fire or for another purpose, we open the water on the valve with an underground hydrant wrench ("T" wrench).

Both outlets on the Hydrant Standpipe have their own valves that allow us to close one or both outlets. The inlet on the lower part of the Hydrant Standpipe is also fi 52 mm ("C").

Technical specifications

Materials:

- Cast in aluminum alloy AK 11 (AlSi 11)
- Brass MO 58
- Gasket - Rubber

Technical characteristics	
Inlet	Ø 52 mm
Working pressure	10 bar
Weight	approx. 5,2 kg
