

Monitors, Hytrans System

100487

Hytrans® Fire System offers a large variety of trailer mounted as well as portable monitors.

The proven and well tested system components guarantee high performance and large throw range. Besides the monitors Hytrans also has a large variety of nozzles with variable flow adjustment and optional suitable for adding foam agents.

The video in product description shows a recent delivery of a 53.000 l/min (14.000 gpm) HFS® Monitor Trailer System 12 (MTS12). This trailer is unique because of a completely flat aluminium checkered plated anti-slip platform (no obstacles) and the extremely reduced overall-height of the platform.

This can be done because of the wheel axles which can be lowered hydraulically, allowing operators more space to move around safely during operation. The monitor is quick to deploy with a minimum amount of extra materials needed to get up and running. The system is fed by two 12" hoses with our HFS® MultiLug couplings (other inlet couplings at choice). Because of the low height of the coupling connections the hoses do not require hose supports.
