

## Reduction Coupling 52/38 mm (C/H) Forged

1033213

Fire reduction couplings are used in firefighting to connect firefighting equipment of different diameters to each other.

As the name itself suggests, the coupling reduction is used when we want to make a transition from a larger diameter fire hose or fire fitting to a smaller diameter. The reduction coupling is compatible with other "Storz" firefighting couplings.

The inlet of the reduction coupling has a diameter of 38 mm (H) and is connected to a fire hose or nozzle of the same diameter. The outlet of the reduction coupling has a diameter of 25 mm (D), and a fire hose or nozzle of the same diameter can be connected.

Firefighting reduction couplings can be made of cast aluminum, forged or brass.

### Technical specifications

#### Materials and details:

- Diameter: 38/25 mm
- Clamp fittings, centre section cast in forged aluminum
- Gaskets rubber
- Locking pin steel galvanized
- Type: Storz
