

Rescue pack E.A.S.E.

100052

The EASE system distributes supplementary air into a SCBA within a risk area where immediate removal to fresh air of an injured or distressed wearer is not possible, "entrapment". The connection can be made with both systems charged. Once connected, the EASE unit will provide a pressure approximately 1 bar above the medium pressure of the SCBA.

- Pressure gauge, regulator and audible warning
- 3 meter medium pressure hose
- Equipped with both male and female connector
- Carrying bag in highly visible yellow color

Variants are available with "Interspiro" and "Euro" type connectors and for different cylinder types.
