

## Rope Ladder

3001062

The Rope Ladder consists of two parallel ropes and wooden beams made of steamed beech, fastened with a special tie.

They are made of hemp and polyester in standard lengths from 5 to 30 meters, and at the customer's request in other lengths. They are used in schools and sports halls, and are used by firefighters and rescue services. We see them on old sailing ships as well as on modern boats.

After each use, be sure to inspect the ladder and in case of damage, be sure to put it out of use (use). Store the correct ladder in a room with normal temperature and relative humidity.

### Technical specifications

- Material: 100% hemp
- Rope diameter: 20 mm
- Bar length: 50 cm
- Bar diameter: 30 mm
- Distance between bars: 30 cm
- Tread length: 35 cm
- Rope breaking force: (daN): 2530 (2580 kp)
- Bar load: up to 320 kg
- Length: from 5 to 30 meters
