

Sandbox Metal

1022312

The metal sandbox is most commonly used at gas stations or in the vicinity of industrial sand storage facilities for fire fighting. The crate is recognizable in red and made of metal protected against corrosion and resistant to all weather.

The material of the cabinet is Elo-Zn sheet 0.8 to 1.5 mm thick, and in order to achieve maximum corrosion protection, each individual element is additionally electrostatically painted and thermally treated, so that the varnished surface except more corrosion resistant it also has the added aesthetic value of being able to fit into the interior of a residential building. The cabinets are supplied standard in RAL 3001 red.

Additional options for the crate:

- Sand shovel (not supplied with box)
