

## Stable Coupling 52 mm "C", Internal Thread R2 Brass

1033264

Stable fire couplings are installed on firefighting equipment, which connects to fire hose.

Stable fire coupling Ø 52 mm is a fire coupling that can be installed on fire fittings and other firefighting equipment that connects to fire hoses (nozzles, valves, hydrant extensions, manifolds, busbars, suction baskets ...). Storz fire couplings are divided into couplings with internal and external thread, and the material of construction into cast, forged and brass.

Due to its greater resistance and strength, the brass fire coupling is used when working with high water pressure (connection of high-pressure fire hoses with fire fittings).

### Features:

- Material: brass
- Gasket: rubber
- Diameter: Ø 52 mm (2 ")
- Thread: Inner, Female
- Standard: DIN 86204
