

## Steel Suction Strainer 75 mm

1007287

The suction basket strainer is intended for pumping out clean and dirty water. It protects the pump and fire fittings from dirt penetration and possible damage. The strainer is connected to the Suction PVC hose using a clamp.

When suctioning clean or dirty water, immerse the suction basket in water and connect the other end of the suction hose to the pump. During pumping, periodically remove the end of the hose on which the suction strainer is located, and clean the basket if larger dirt from the water has stuck to it.

### Main characteristics:

- Material: iron
- Color: black
- Diameter: Ø75 mm
- Application: suction of clean or dirty water
