

Stop Descender Petzl D009AA00

1029322

Assisted braking descender for caving

Descend with assisted braking for your cave explorations! STOP is a caving descender with assisted braking that can be used with 8.5 to 11 mm diameter low stretch kernmantle ropes. It provides better control over the descent and makes maneuvers on the rope easier. The ergonomic handle makes the grip and overall use especially comfortable. Stainless steel friction zones make it a durable tool for all your excursions!

Description

Descent control:

- Assisted braking improves control during the descent
- Rope maneuvers are made easier when passing intermediate anchors
- Compatible with 8.5 to 11 mm diameter low stretch kernmantle ropes

Comfort:

- The ergonomic handle allows you to easily unblock the rope and lower someone
- Handle faces user for better control of rope glide
- Design of the handled camming mechanism offers a comfortable descent
- Installation diagram engraved on the descender
- Safety gate on the openable side plate allows the rope to be installed easily while the device remains connected to the harness
- Elongated connection hole allows the FREINO Z carabiner to be rotated to help prevent dropping the descender when transferred from gear loop to attachment point
- Stainless steel pulley and cam provide great durability

Technical specifications

Specifications

- Materials: Aluminum side plate, stainless steel pulley and cam
- Weight: 350 g
- Rope compatibility: 8.5 to 11 mm low stretch kernmantle rope
- Certification(s): CE EN 15151-1, UKCA
