

Wrench for ABC Couplings, aluminium

1033268

Wrench for ABC couplings, double-sided, made of cast aluminum. One side of the key is used to open the overground fire hydrant and the other side to open and tighten the fire couplings.

Due to its reduced weight, this fire wrench for couplings is used by firefighters in fire competitions, in the quick connection of the suction line. It can also be used to control and check the correctness of the overground fire hydrant and connect the fire hoses to the hydrant.

Technical specifications

- Used for opening and tightening of Fire couplings: C Ø52, B Ø75, A Ø110.
- Material: aluminium alloy
- Weight: approx. 150 g
